EXPERIENCE

DevOps Engineer / AI Champion

UBS

10/2022 - Present — Krakow, Poland

Leading platform engineering and AI adoption for Risk Analytics Treasury IT, building infrastructure that serves 300+ engineers across 200+ microservices. Role encompasses DevOps, Platform Engineering, and AI integration.

Infrastructure (IaC via ARM Templates & Terraform):

- Orchestrated and maintained Kubernetes cluster with 70+ nodes and 500 pods using **Azure Kubernetes Service**, executing automated scaling with **KEDA**, security policies with **OPA/Gatekeeper**, and high availability patterns
- Architected high-performance computing infrastructure with 20,000+ CPUs using **Azure Batch** across Windows/Linux pools with VM Scale Sets for risk calculations
- Oversaw 150+ storage volumes across **Azure Blob Storage**, **Cosmos DB**, and **Redis**; deployed **MongoDB Atlas** with sharding and replica sets
- Managed 100+ virtual machines with automated patching using **Azure Update Management** and configuration management via **Ansible**
- Constructed caching layer using **Redis** reducing backend load by 70%
- Designed network topology with **Azure VNet**, **Load Balancers**, and **Ingress Controllers**
- Built unified observability stack using **Grafana**, **Prometheus**, and **Azure Monitor** for end-to-end visibility across all infrastructure components

Platform & DevOps:

- Architected self-service platform for 200+ **.NET microservices**; generated base templates using **Helm Charts** and **Kustomize** adopted across the stream
- Built ephemeral CI platform using **Terraform**, **Bash**, **Python**, and **Go** to spin up complete environments, execute regression and E2E tests, and tear down infrastructure automatically
- Transformed releases from 2-month to 2-day cycles implementing GitOps with **Flux CD**, infrastructure as code with **Terraform**, and trunk-based development
- Redesigned CI/CD pipelines using **GitLab CI** with optimized build, test, and deployment stages; integrated **SonarQube** for code quality and **Fortify** for security scanning
- Streamlined build systems with **Maven** and **Gradle** for Java services alongside .NET pipelines
- Migrated scheduling to event-driven serverless architecture using **Azure Functions**, **Event Hub**, and **Cosmos DB** with change feed

AI/ML Integration:

- Integrated **Azure OpenAI** for automated code reviews, reducing review cycles from hours to seconds for 300+ developers
- Built RAG system using **Azure Cognitive Search** with vector search capabilities, **OpenAI Embeddings**, and enhanced chunking strategies indexing entire Confluence knowledge base
- Developed document processing pipeline using **LangChain** and **LangGraph** for semantic search across technical documentation and code repositories
- Designed AI automation workflows using **Python**, **FastAPI**, and **Redis** for caching and high-performance API endpoints

Leadership: Scrum Master for 2 years; mentored 50+ engineers; organized hackathon with 300 participants; delivered 3 major presentations to UBS leadership

Platform Engineer / Tech Lead

Luxoft (UBS Client)

10/2019 - 10/2022 — Krakow, Poland

Spearheaded platform modernization for large-scale financial services, transforming CI/CD and infrastructure practices.

Infrastructure:

- Consolidated 200+ TeamCity agents to 25 containerized GitLab Runners on **AKS**, reducing queue times from 48h to 30min using Kubernetes autoscaling
- Established secrets management using **HashiCorp Vault** across all environments, managing 1,200+ credentials with custom **Golang** wrapper for secure API access
- Directed hybrid VM fleet with **Windows Server** and **Linux**; configured **Azure AD** integration with RBAC for identity management
- Arranged network architecture using **VNet Peering**, **Azure Load Balancer**, and **Nginx Ingress Controller** for secure

SUMMARY

DevOps Engineer with platform engineering and AI expertise. 14+ years of experience spanning DevOps, platform engineering, cloud infrastructure, and AI/ML integration. 15+ years of **Python** expertise utilized for AI automation, FastAPI services, and infrastructure tooling. Currently serving as DevOps Engineer & AI Champion at UBS, directing platform and AI initiatives for 300+ engineers across 200+ microservices. Track record of transformational impact: reduced release cycles from 2 months to 2 days, cut infrastructure costs by 50%, and deployed enterprise LLM solutions at scale. Combines deep technical execution with proven leadership—mentored 50+ engineers, served as Scrum Master, established 700-member tech community. MSc in Electronics with research in parallel computing (CUDA/OpenCL).

EDUCATION

MSc Electronics

Image Processing & Parallel Computing (CUDA)

Eastern Mediterranean Univ., 2013

BSc Electronics

Azad University, 2008

topology

- Streamlined storage using **Azure Managed Disks** with SSD for databases and standard tiers for logs; utilized Persistent Volumes in AKS

Platform & DevOps:

- Migrated 10M+ lines of code from TeamCity to **GitLab CI** in 3 months using GitLab Pipelines as Code; reduced feedback from 24h to 40min
- Built event-driven resource allocation using **Azure Functions** and **Service Bus** for dynamic database provisioning to CI pipelines
- Resolved dependency graph in legacy **.NET monolith** application with massive **MSBuild** system containing 1,000+ project dependencies; guided Visual Studio 2013 to 2015 migration with multiprocessing
- Drove GitOps adoption using **Flux CD** and **Terraform**, establishing "everything as code" standards

DevOps Platform Engineer

Betik Bilisim

08/2018 - 10/2019 — Istanbul, Turkey

Built hybrid cloud platform and computer vision services for 8 Istanbul municipalities serving 200,000+ users.

Infrastructure:

- Architected hybrid cloud using **OpenStack** and **OpenShift** for private cloud combined with **AWS EKS** for public cloud, achieving 99% uptime and 50% cost reduction
- Deployed distributed storage using **Ceph** for high availability; arranged **Nginx Ingress** for traffic management across Kubernetes clusters
- Provisioned AWS infrastructure using **EKS**, **Lambda**, **DynamoDB**, **Aurora**, and **API Gateway** for scalable public services
- Employed IaC using **Terraform** and **CloudFormation**; launched monitoring with **Prometheus**, **Grafana**, and **CloudWatch**

Platform & AI:

- Implemented configuration management using **Ansible** with **AWX** for centralized orchestration across hundreds of nodes
- Developed OCR service using **Python**, **AWS Lambda**, **DynamoDB**, and image processing libraries for document recognition at municipal scale
- Built Human ID detection microservice using **Golang** and **C++** with computer vision algorithms deployed across municipal services
- Established CI/CD using **GitLab CI** with Git Flow strategy and computerized deployments

Full Stack Developer / DevOps Engineer

Tivan Faham Web Samar

03/2017 - 06/2018 — Shiraz, Iran

Built and operated multiple web and mobile applications for local businesses, starting CI/CD practices and cloud infrastructure for a growing development team.

- Built Ka2yab e-commerce platform using **Angular**, **Laravel**, **Django**; deployed on **Heroku** and **AWS EC2**
- Initiated CI/CD using **GitLab CI**, **Nexus**, and **Ansible**; containerized with **Docker** and **Kubernetes**
- Enhanced applications using **Python**, **Django**, **React** with **MongoDB** and mechanized testing with **Selenium**

Software Developer

Sony Mobile Store

09/2014 - 03/2017 — Shiraz, Iran

Built and sustained customer service web platform and Linux server infrastructure for a growing e-commerce business, scaling the platform 5x during tenure.

- Controlled 15 Linux VPS instances sustaining 99.9% uptime; monitored MySQL database with regular tuning that improved website responsiveness
- Scaled platform from 2,000 to 10,000 daily users through performance tuning and infrastructure improvements
- Built customer-facing web applications using **HTML**, **CSS**, **jQuery**, **Python**, and **Java**
- Crafted internal utility application enabling customers to chat and submit software issues directly, streamlining customer support workflow

Junior Software Developer

Sony Mobile Store

11/2010 - 09/2011 — Shiraz, Iran

Started career in web development and server administration, building foundational skills in e-commerce platforms.

- Customized OpenCart e-commerce templates, doubling website sales through improved storefront user experience
- Upheld multiple VPS server configurations using **PHP** and **jQuery**; gained foundational Linux administration skills

CERTIFICATIONS
